ENVIRONMENTAL POLICY STATEMENT

Statement of intent available to all stakeholders affected by the manufacture of Monier Roofing products.

Monier Limited manufactures and supplies roofing products to the construction industry in the U.K. It seeks to improve its processes to reduce any adverse impact on the environment.

Monier Limited products benefit the community as a whole by providing a weather tight seal on many buildings. Our processes are controlled to produce high quality products with a long and effective life that contribute to the sustainability of buildings. These processes are also designed to ensure maximum benefit from diminishing natural resources and help sustainability through prevention of pollution, minimization of waste, control of air emissions and improved energy efficiency.

Manufacturing operations incorporate a documented Environmental Management Systems 'EMS' which is designed to be audited against ISO14001 and include compliance with all relevant environmental regulations and with other requirements to which the company has subscribed. Monier Limited sets and reviews achievable environmental performance improvement objectives that contribute to a continual reduction in the environmental impacts of the company's products and processes.

In establishing environmental management controls to prevent unacceptable pollution to air, land and water, Monier Limited seeks to be a responsible neighbour and be involved in environmental trade associations and partnerships.

All environmental arrangements are explained further in the EMS manual.
