# REDLAND METAL ROOFING

## Lightweight roofing-heavyweight performance

For over 25 years this lightweight metal roofing system has been a popular choice for pitched roofs around the world.

- Weighing as little as 4.8 kg/m<sup>2</sup>, makes it ideal for flat to pitched roof conversions
- Manufactured in long lengths up to 6.4 metres, fewer battens/purlins are required compared with other tile-effect systems
- Cost-effective and quick and easy to fix, which reduces labour costs
- 10° minimum pitch
- Offered in a variety of profiles, colours, finishes and thicknesses, Redland Metal Roofing suits most pitched roofs
- Exceptional strength allows full roof walkability
- Awarded British Board of Agrément certificate no. 90/2509 and complies with BS 5427-1: 1996
- Guaranteed for up to 30 years

For more information on the Redland Metal Roofing range: Request a brochure by telephoning our Customer Service Hotline on 08705 601000 or visit [www.redland.co.uk/brochures](http://www.redland.co.uk/brochures)

As TerraPLEGEL Hi Load is mechanically fixed and spans in long lengths it is difficult to remove and damage

TerraPLEGEL Hi Load, Dutch Pantile, Grey Post-war modular housing

An eaves to ridge sheet means quicker installation and less supporting structure

TerraPLEGEL, Dutch Pantile, Red 740 and Dark Green 830. Flat to pitched roof conversions, Newham, London

The London Borough of Newham chose the Redland Metal Roofing system for flat-to-pitch conversions on these apartment blocks. The light weight, coupled with its close resemblance to profiled roof tiles, made it an ideal refurbishment solution.
